

## Application Development 2 - Week 4

---

Create the following app based on the screenshot. When you click on each button, a corresponding audio reading the text in French should be played and a seekbar should be shown completed.

After the seekbar is at %100, the app should navigate to another page and a random Youtube video teaching a grammar topic in French should be shown. You can use <https://ielanguages.com/french.html> website to get some audio.
